Healthy adults, ages 40-80, needed for research study

Healthy adults between the ages of 40-80 are invited to participate in a study using the InMotion2 robot. This study consists of a **single visit** lasting 60-75 minutes assessing arm movements of the shoulder and elbow. Participants will be compensated \$35 for the completed visit. Participants must:

- Have no limitations in strength and range of motion of both arms
- Be between 40-80 years old with no history of neurological conditions such as stroke, Parkinson's, traumatic brain injury
- Be medically stable
- Be able to provide informed consent
